- Right click Local Folder and click settings.

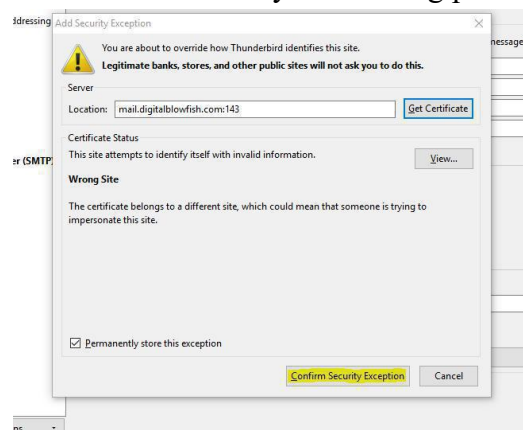

-click "Account Actions" and select "Add Mail Account…"

- Fill up your name, email address, and password(**team1234**), then click continue, after that click done.

 - if come out security alert/wrong password, then select "**confirm security exception**"

- Then u will done setting email, if come out again security alert, then just select "**Comfirm security exception.**

- Then go to previous dbf email and copy all your important email and paste in the new dbf mail inbox, after that , remove the previous dbf mail, because it will influence your new dbf email.
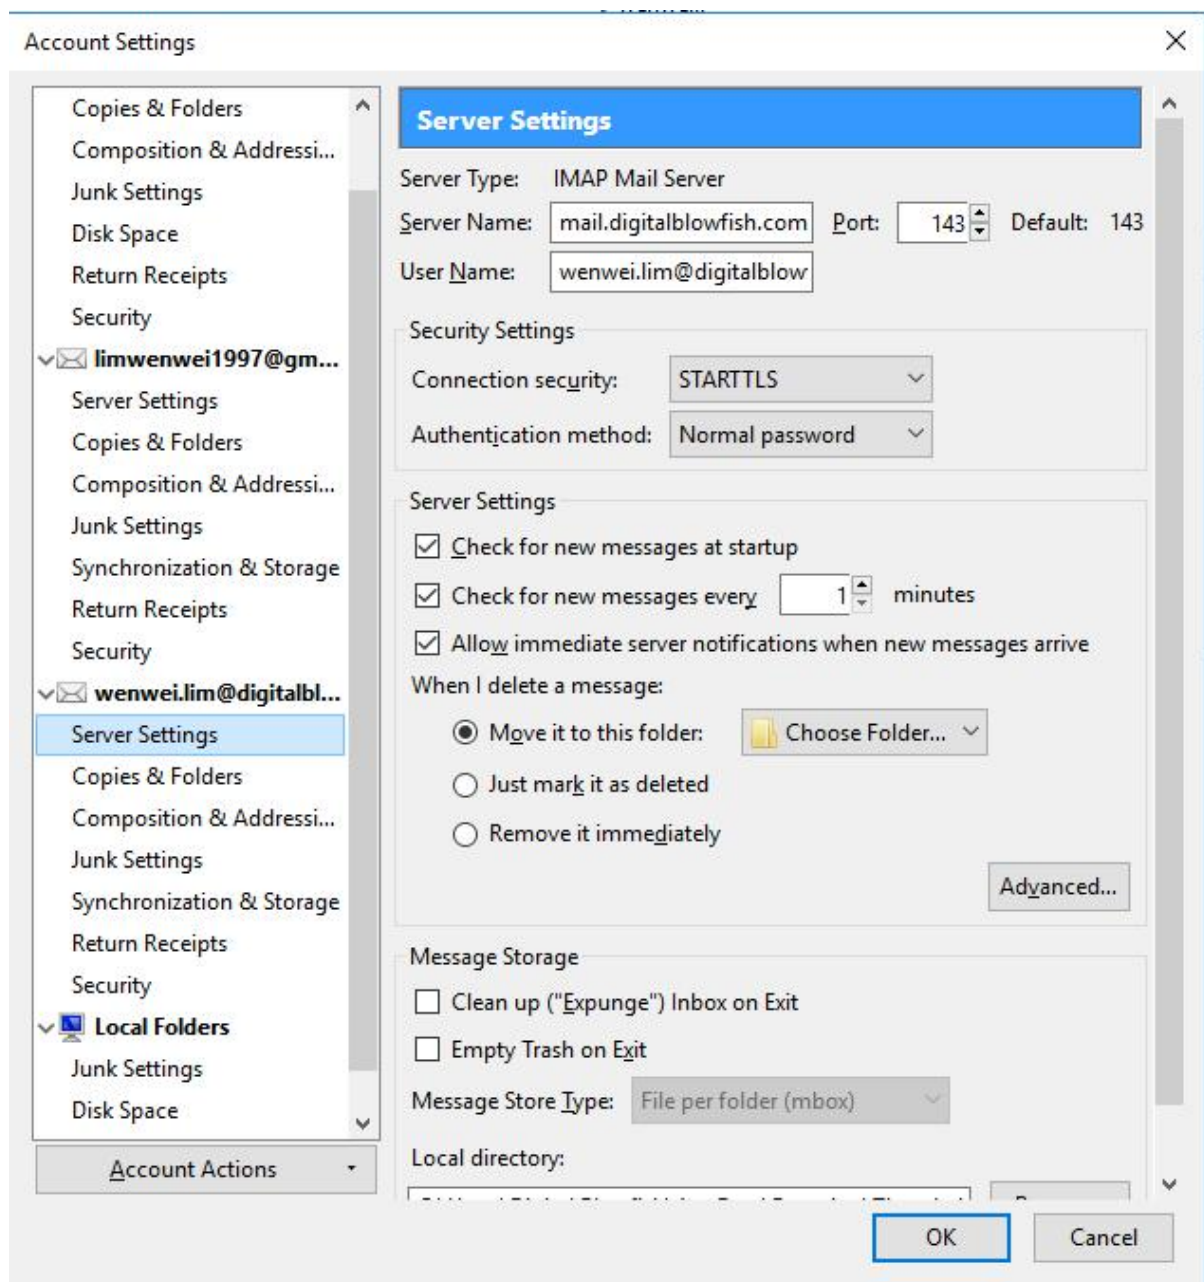

Issues:

- If come out or say server already exist, go to
"Right click Local server " > "Settings" > scroll down till "Outgoing Server"

Check and delete all remove not relate server name.

- Last check send / receive function working or not.

Screenshot of example correct settings.
